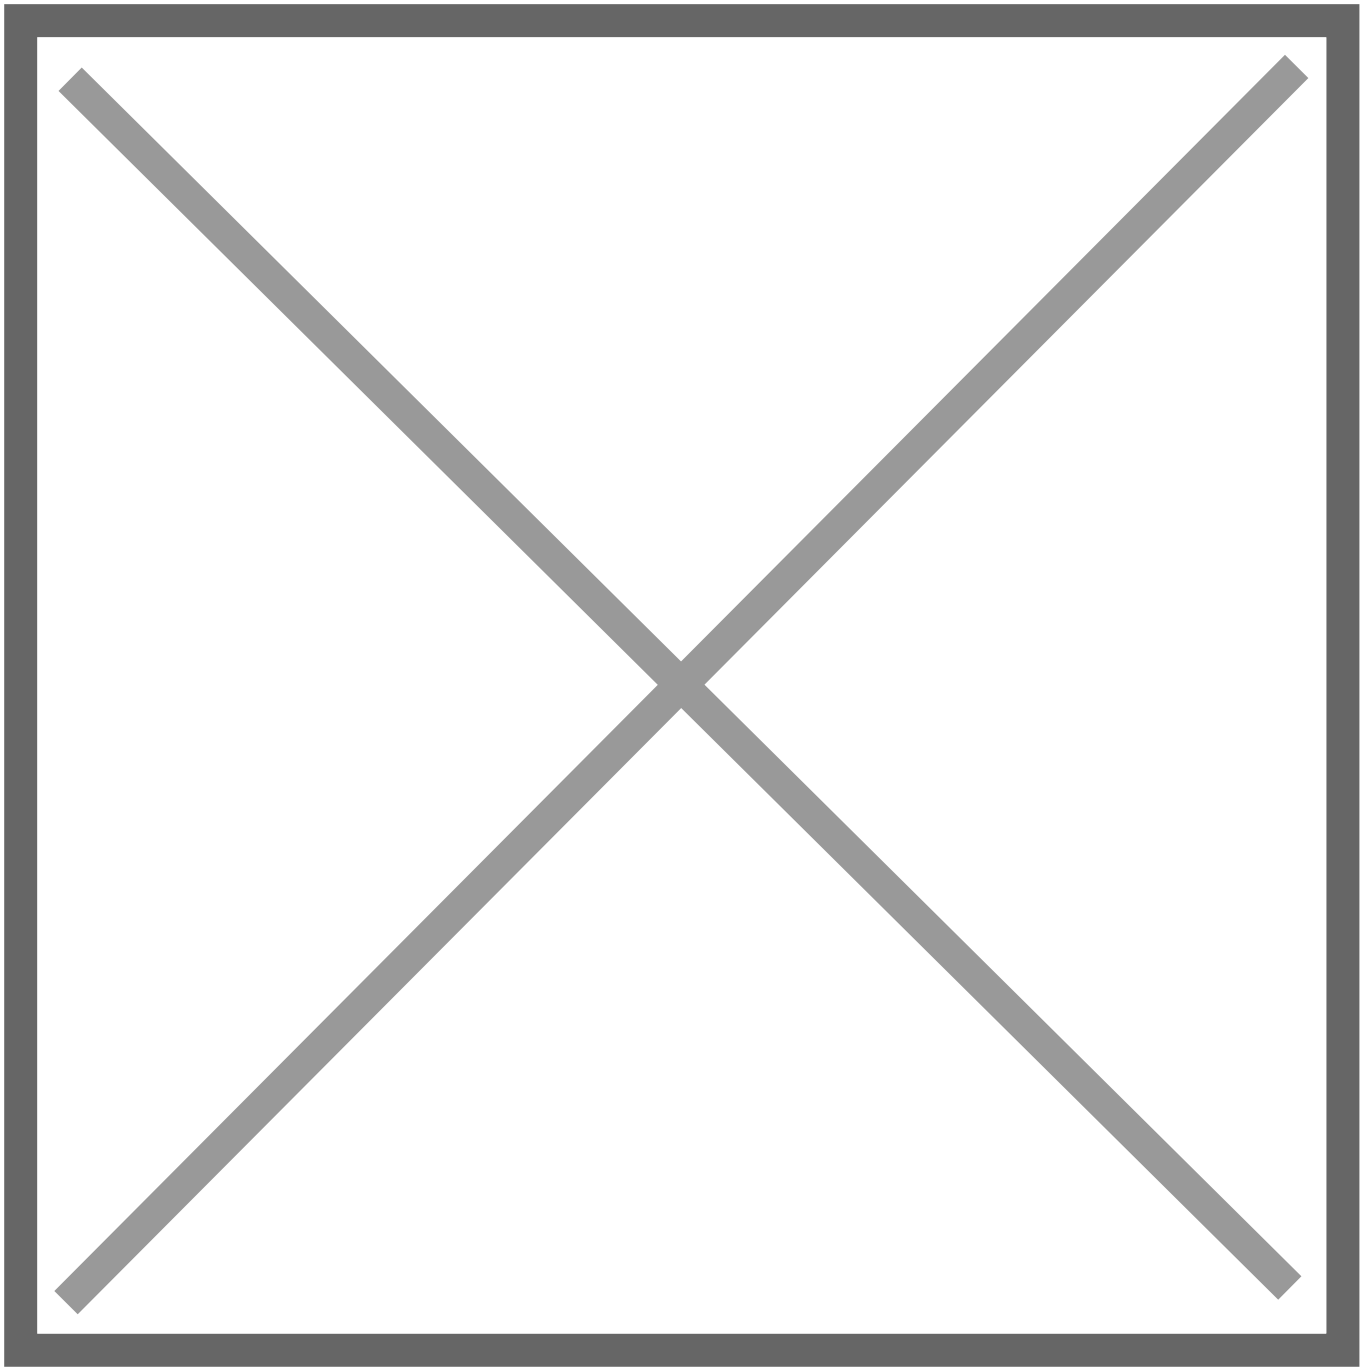
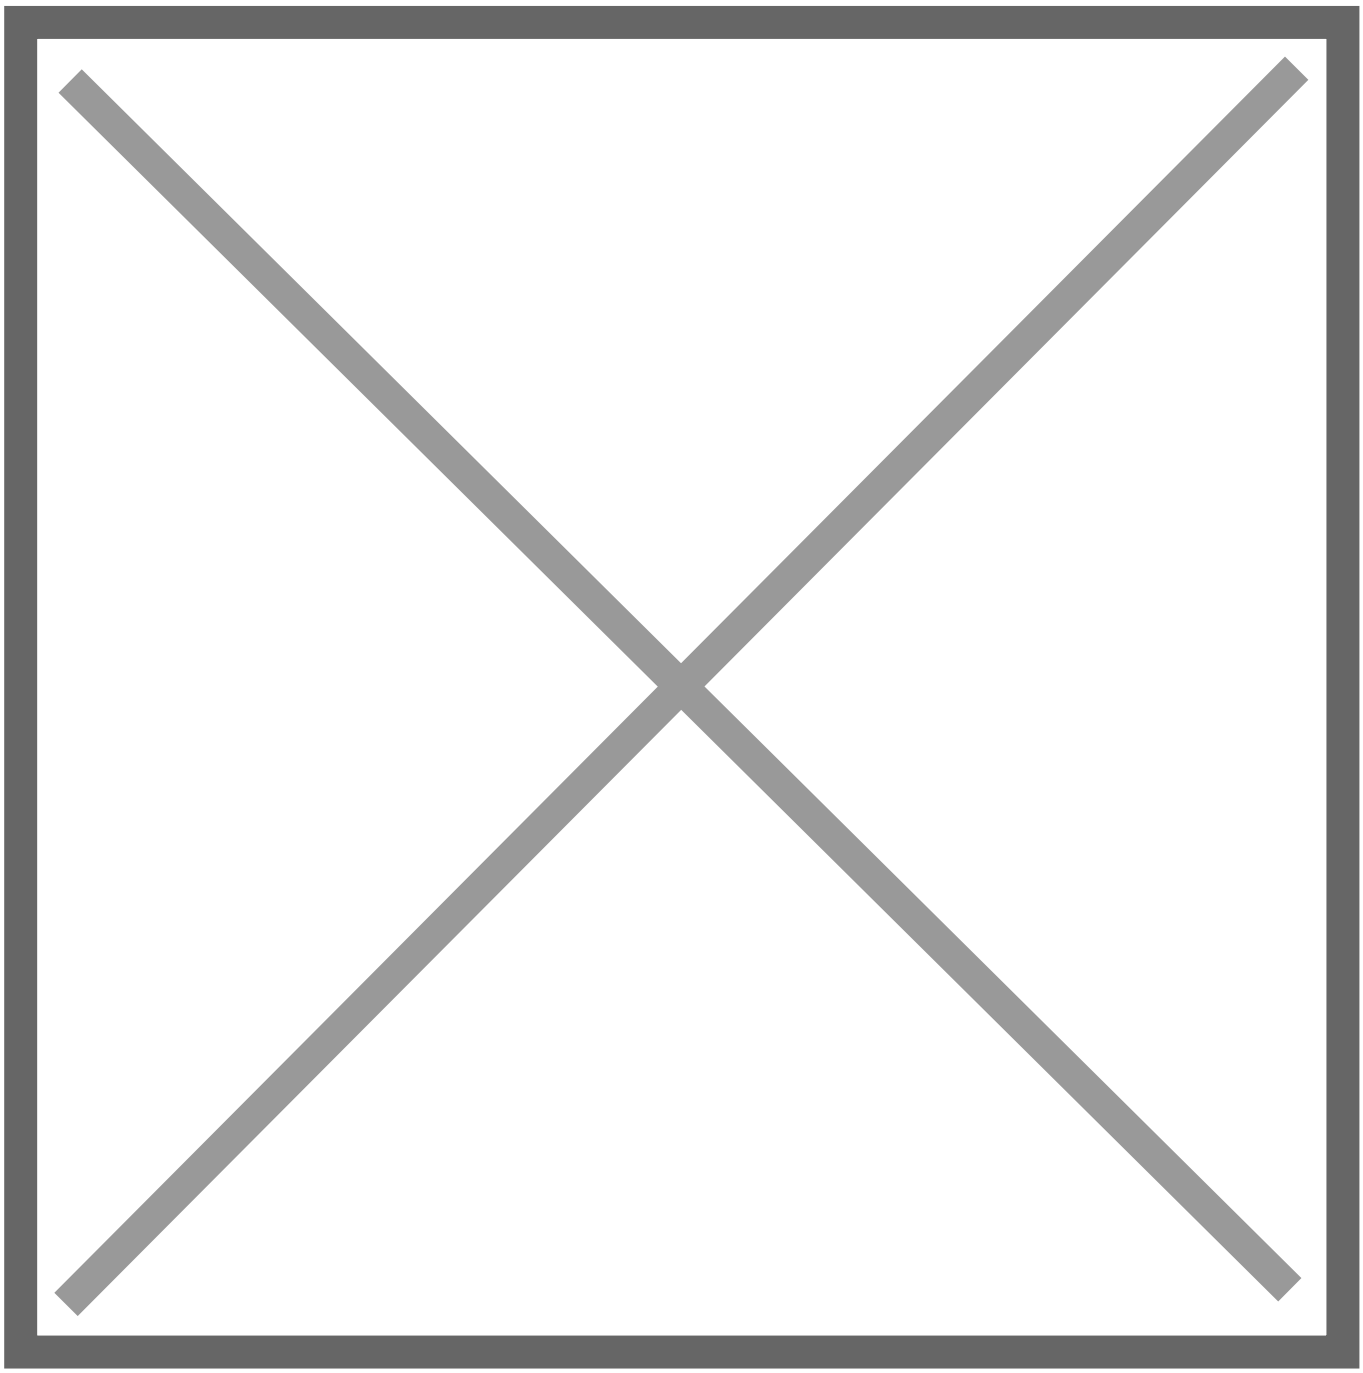
Navigation in diesel



Navigation links or navlinks for short are **ElementSpecialObjective**s that have "Is Navigation Link" set to true.

They are used to allow enemies to get from one navigation part to another.



When they are executed they can be used freely by enemies/ai teammates. You need to go to "Manage Access Flags" and select which units should be able to use this navlink.

"Search Position" needs to be somewhere in the navigation area that the enemy should go to after doing the animation.
