

# GVF Types

## Simple Types

- Number: A literal number. The game engine can usually take either a float or an int.
- Int64: Ending the number with an `i64` means it's an int and is usually used for score values.
- String: A literal string encased in double quotation marks (`"`).

## Localized String

`T( "string" )`

Often used in UI elements.

## Tuple

`[ 1, 2, 3<,4> ]`

So far only used for numbers. Commonly used in UI and OFX.
